

MD-1000D

Print Bigger + Faster

Eight Advantages

5X Faster Print Speed

1000*1000*1000mm Large Build Volume

Dual Extruder

350 degrees High Temperature Hot End

New Cooling System Design

Camera & WIFI

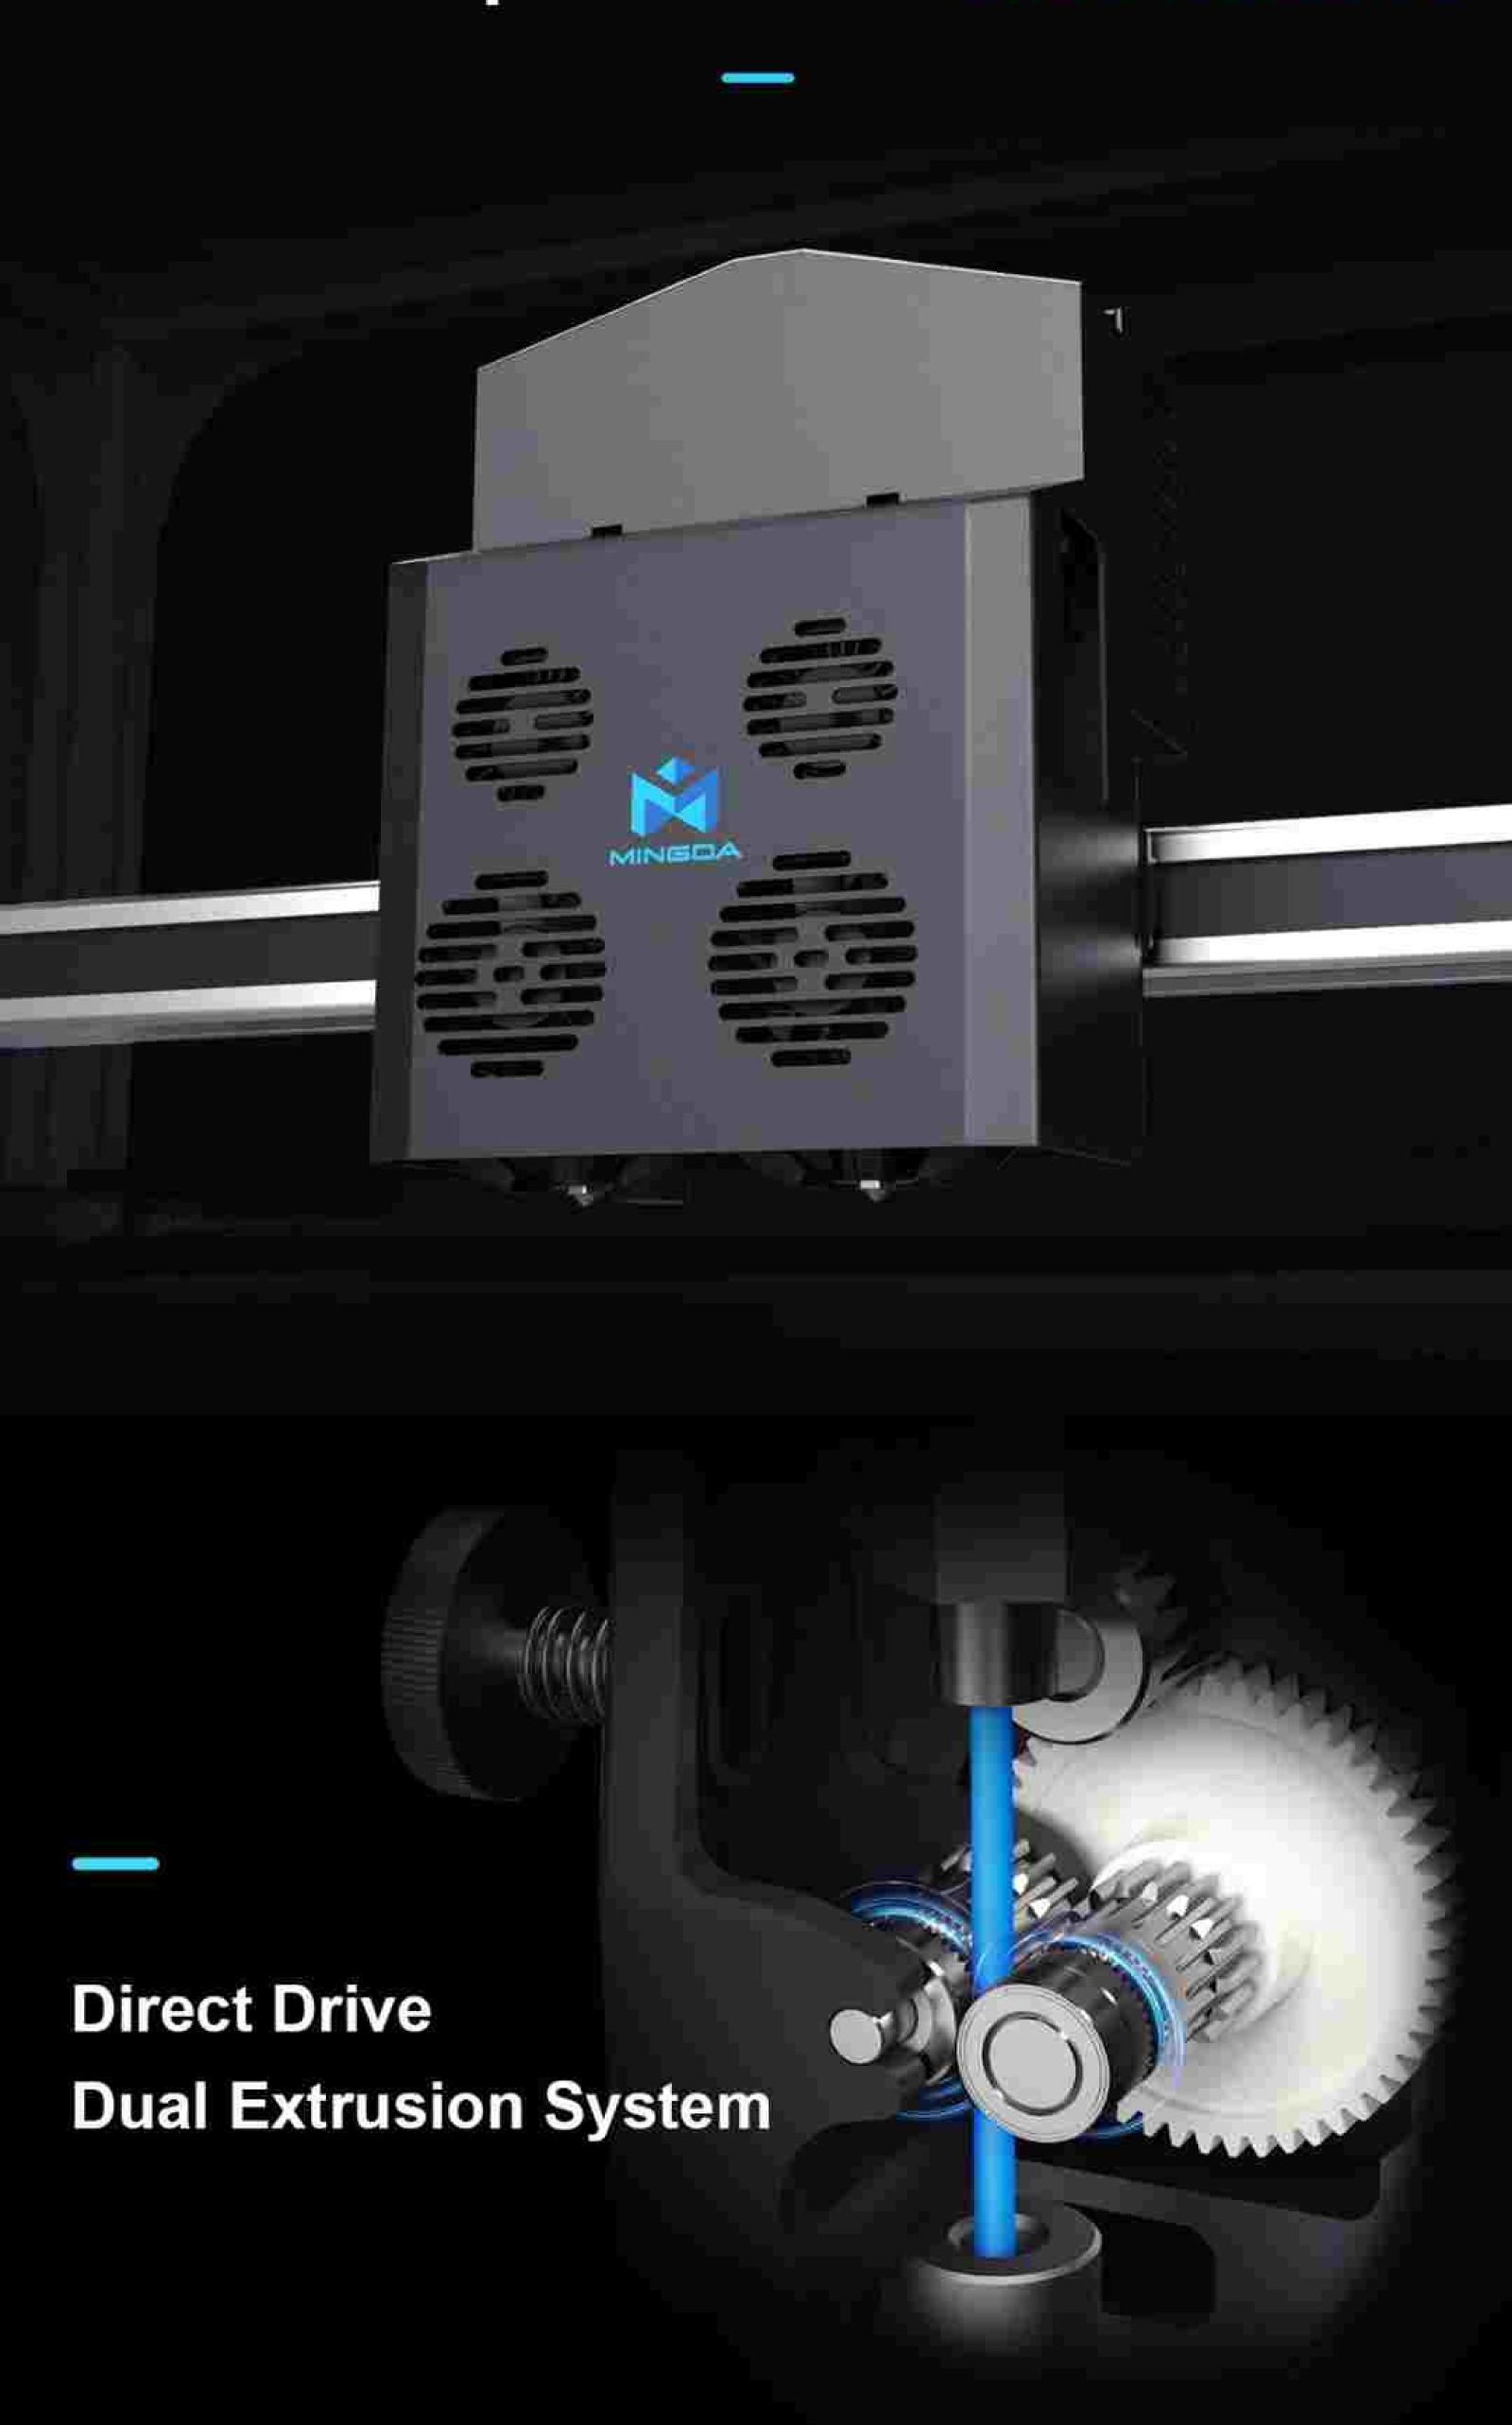

Free Leveling

Input Shaper

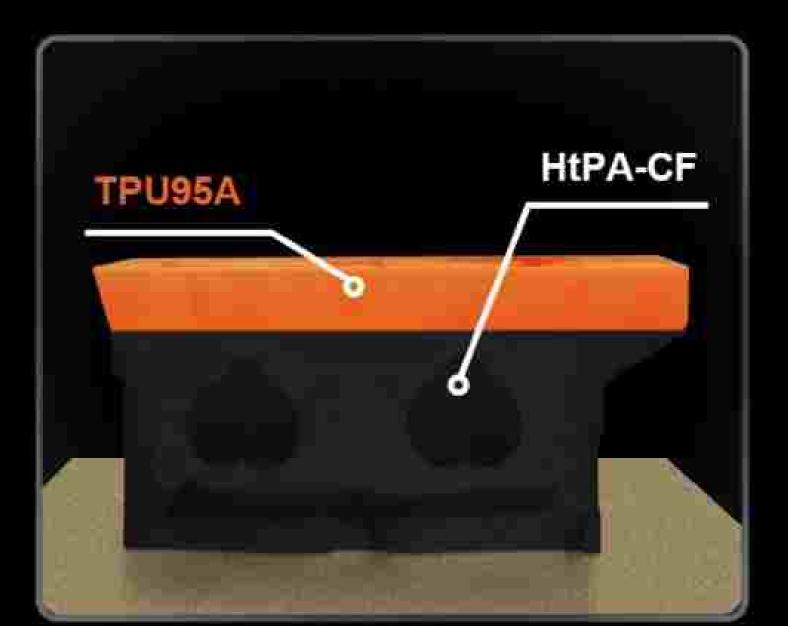

Fighter jets in industrial large Format 3D printers with Dual Nozzles

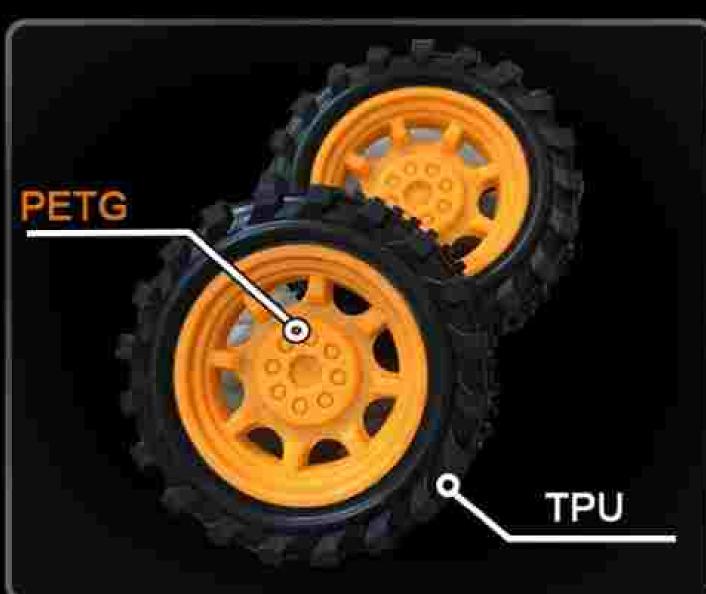

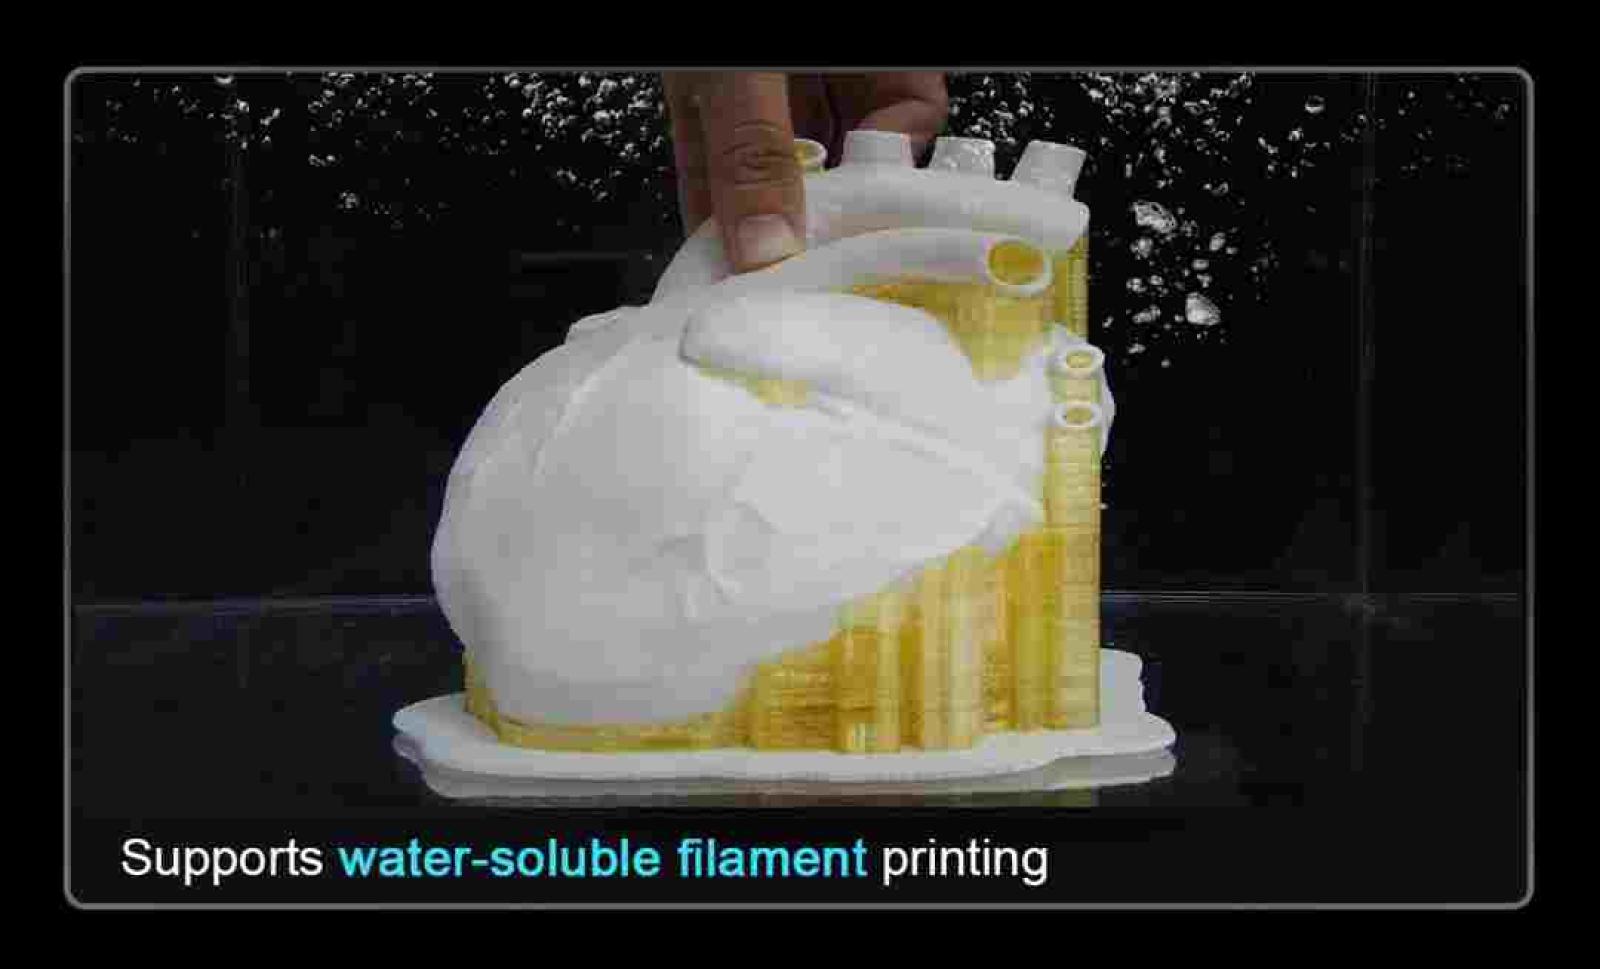

Supports TPU95A and HtPA-CF, while printing TPU and PETG simultaneously.

5X Speed, Breakthrough in Printing Efficiency Once Again

MD-1000D printing speed up to 300mm/s, 10000mm/s ² Peak acceleration, only 0.02s speed up form 0 to 300mm/s, achieving ultra-high efficiency printing.

500mm/s

Travel speed

300mm/s

High-Speed

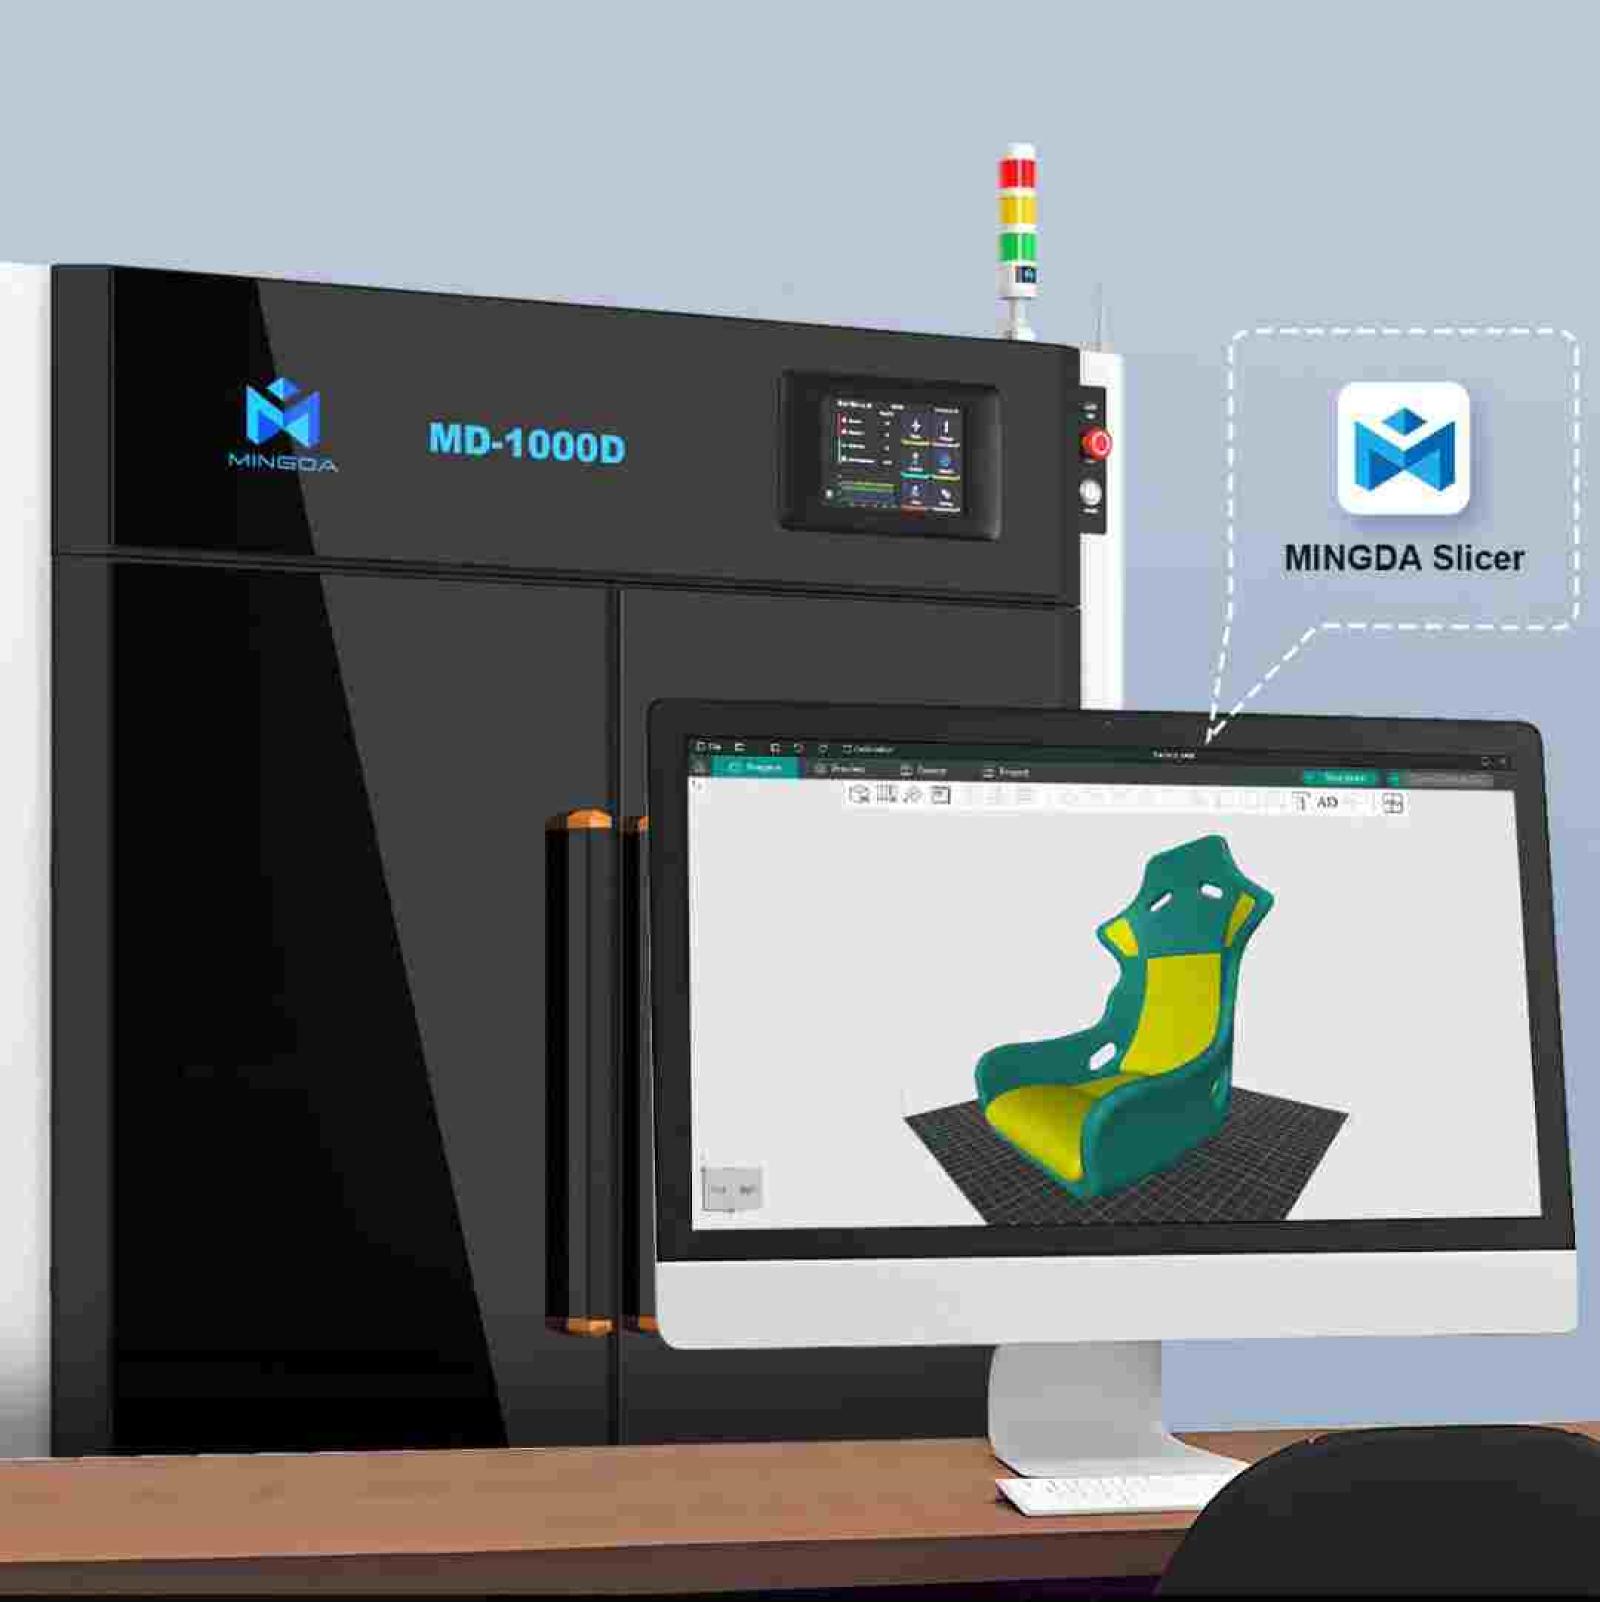

40mm³/s

Max Flow

High Speed, Starting From Slicing

MINGDA Slicer, a new generation of self-developed slicing software, is easy touse, hasrichpresets, and is deeply optimized for high-speed printing.

Automobile Seat Case Sharing

Filament

PLA-HF

Speed

250mm/s

Model size

800*800*1000mm

Printing time

4 days

Compare other regular FDM large format printers on the market

Printing Speed: 50mm/s Printing Time: 20 days

* The experimental data is for reference only

Large Printing Size

Build volume: 1000*1000*1000mm

We Provide The Following Promises

Good after-sales service is the key to test whether a company manufactures high-quality products

One Year Warranty

Lifetime Maintenance

Factory Direct Sales

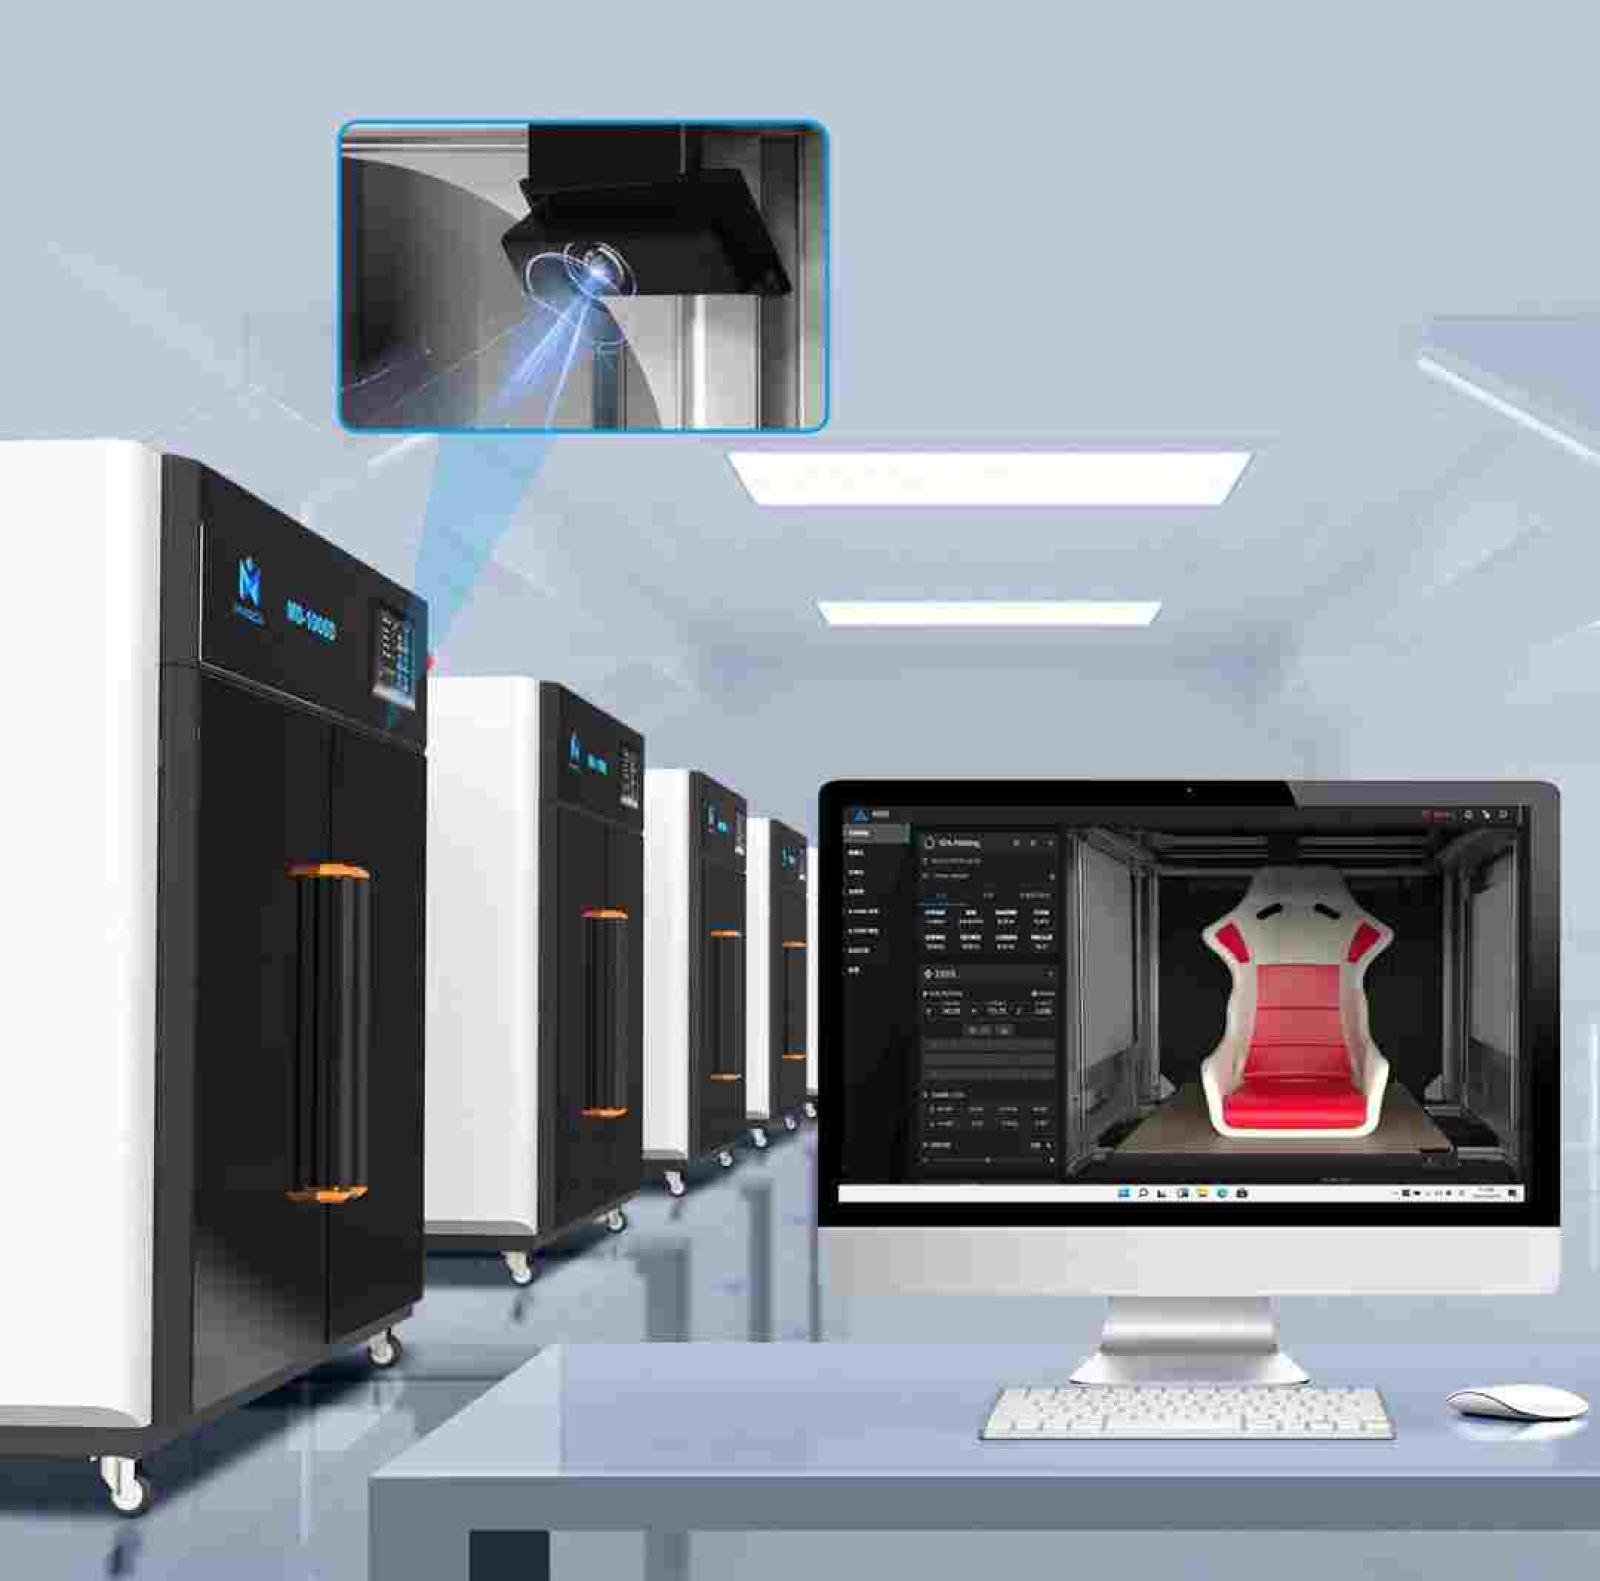

Quality Assurance

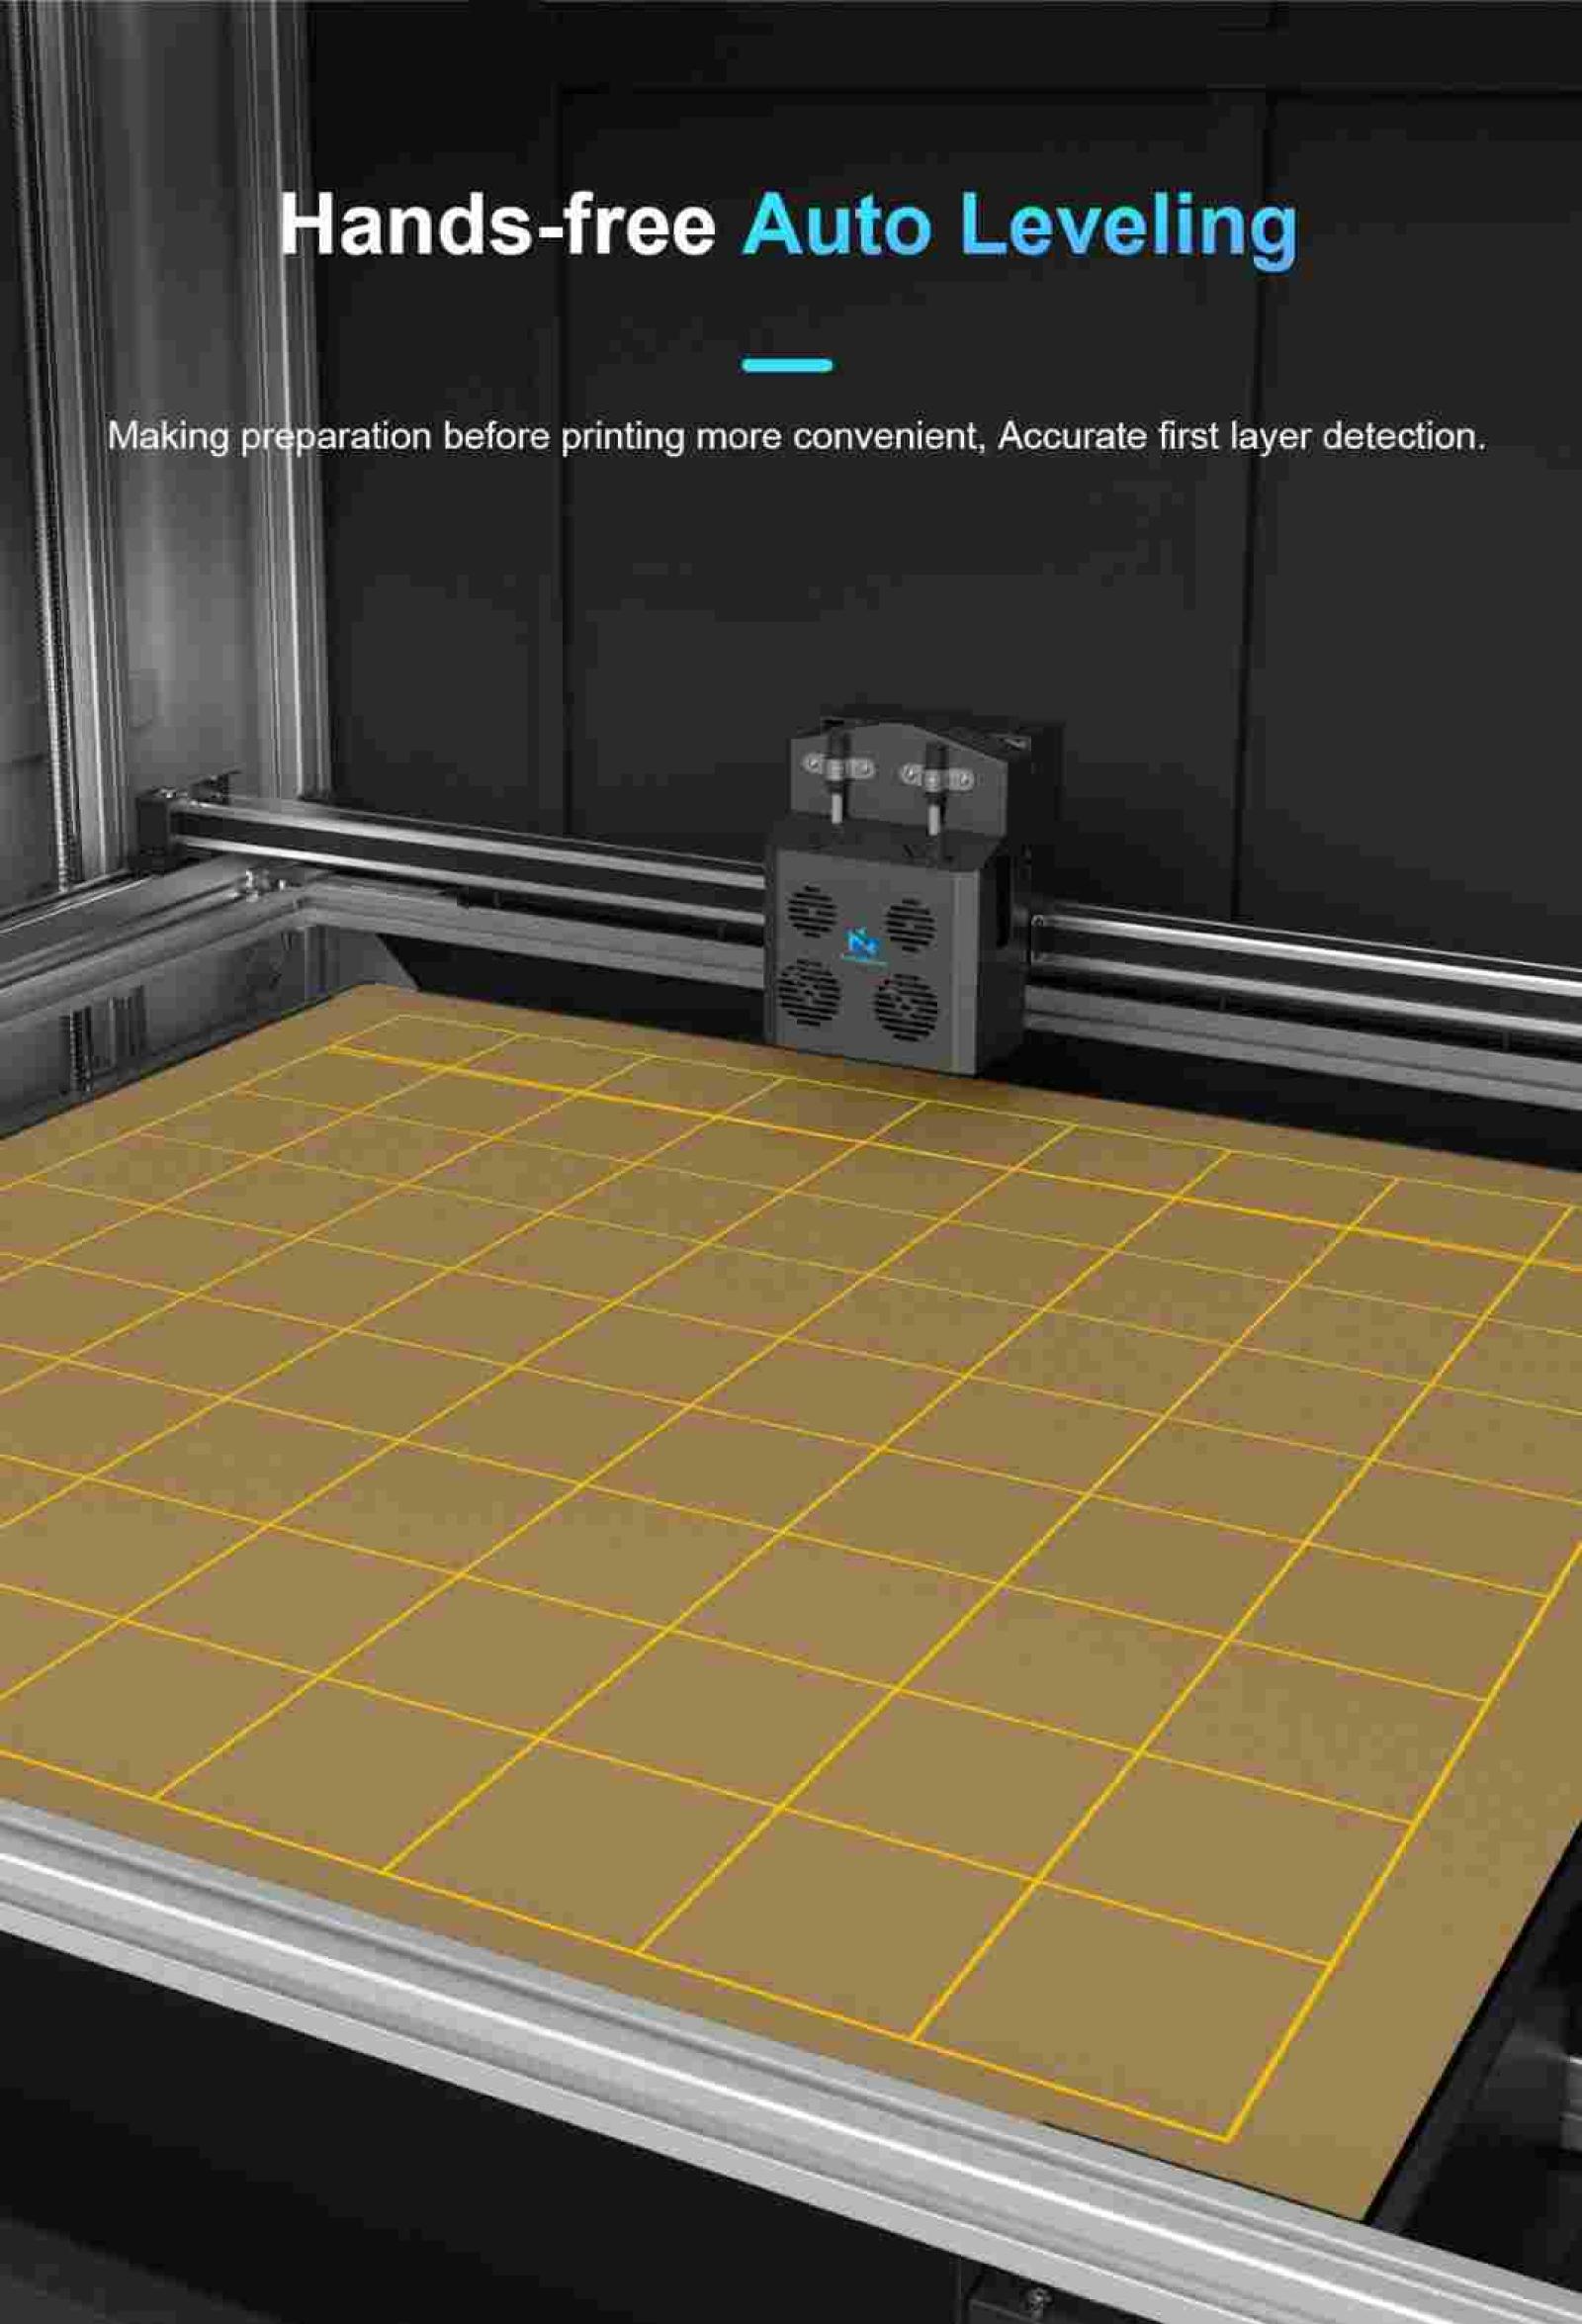

Technical Support

Remote Printing Multi-Machine Control

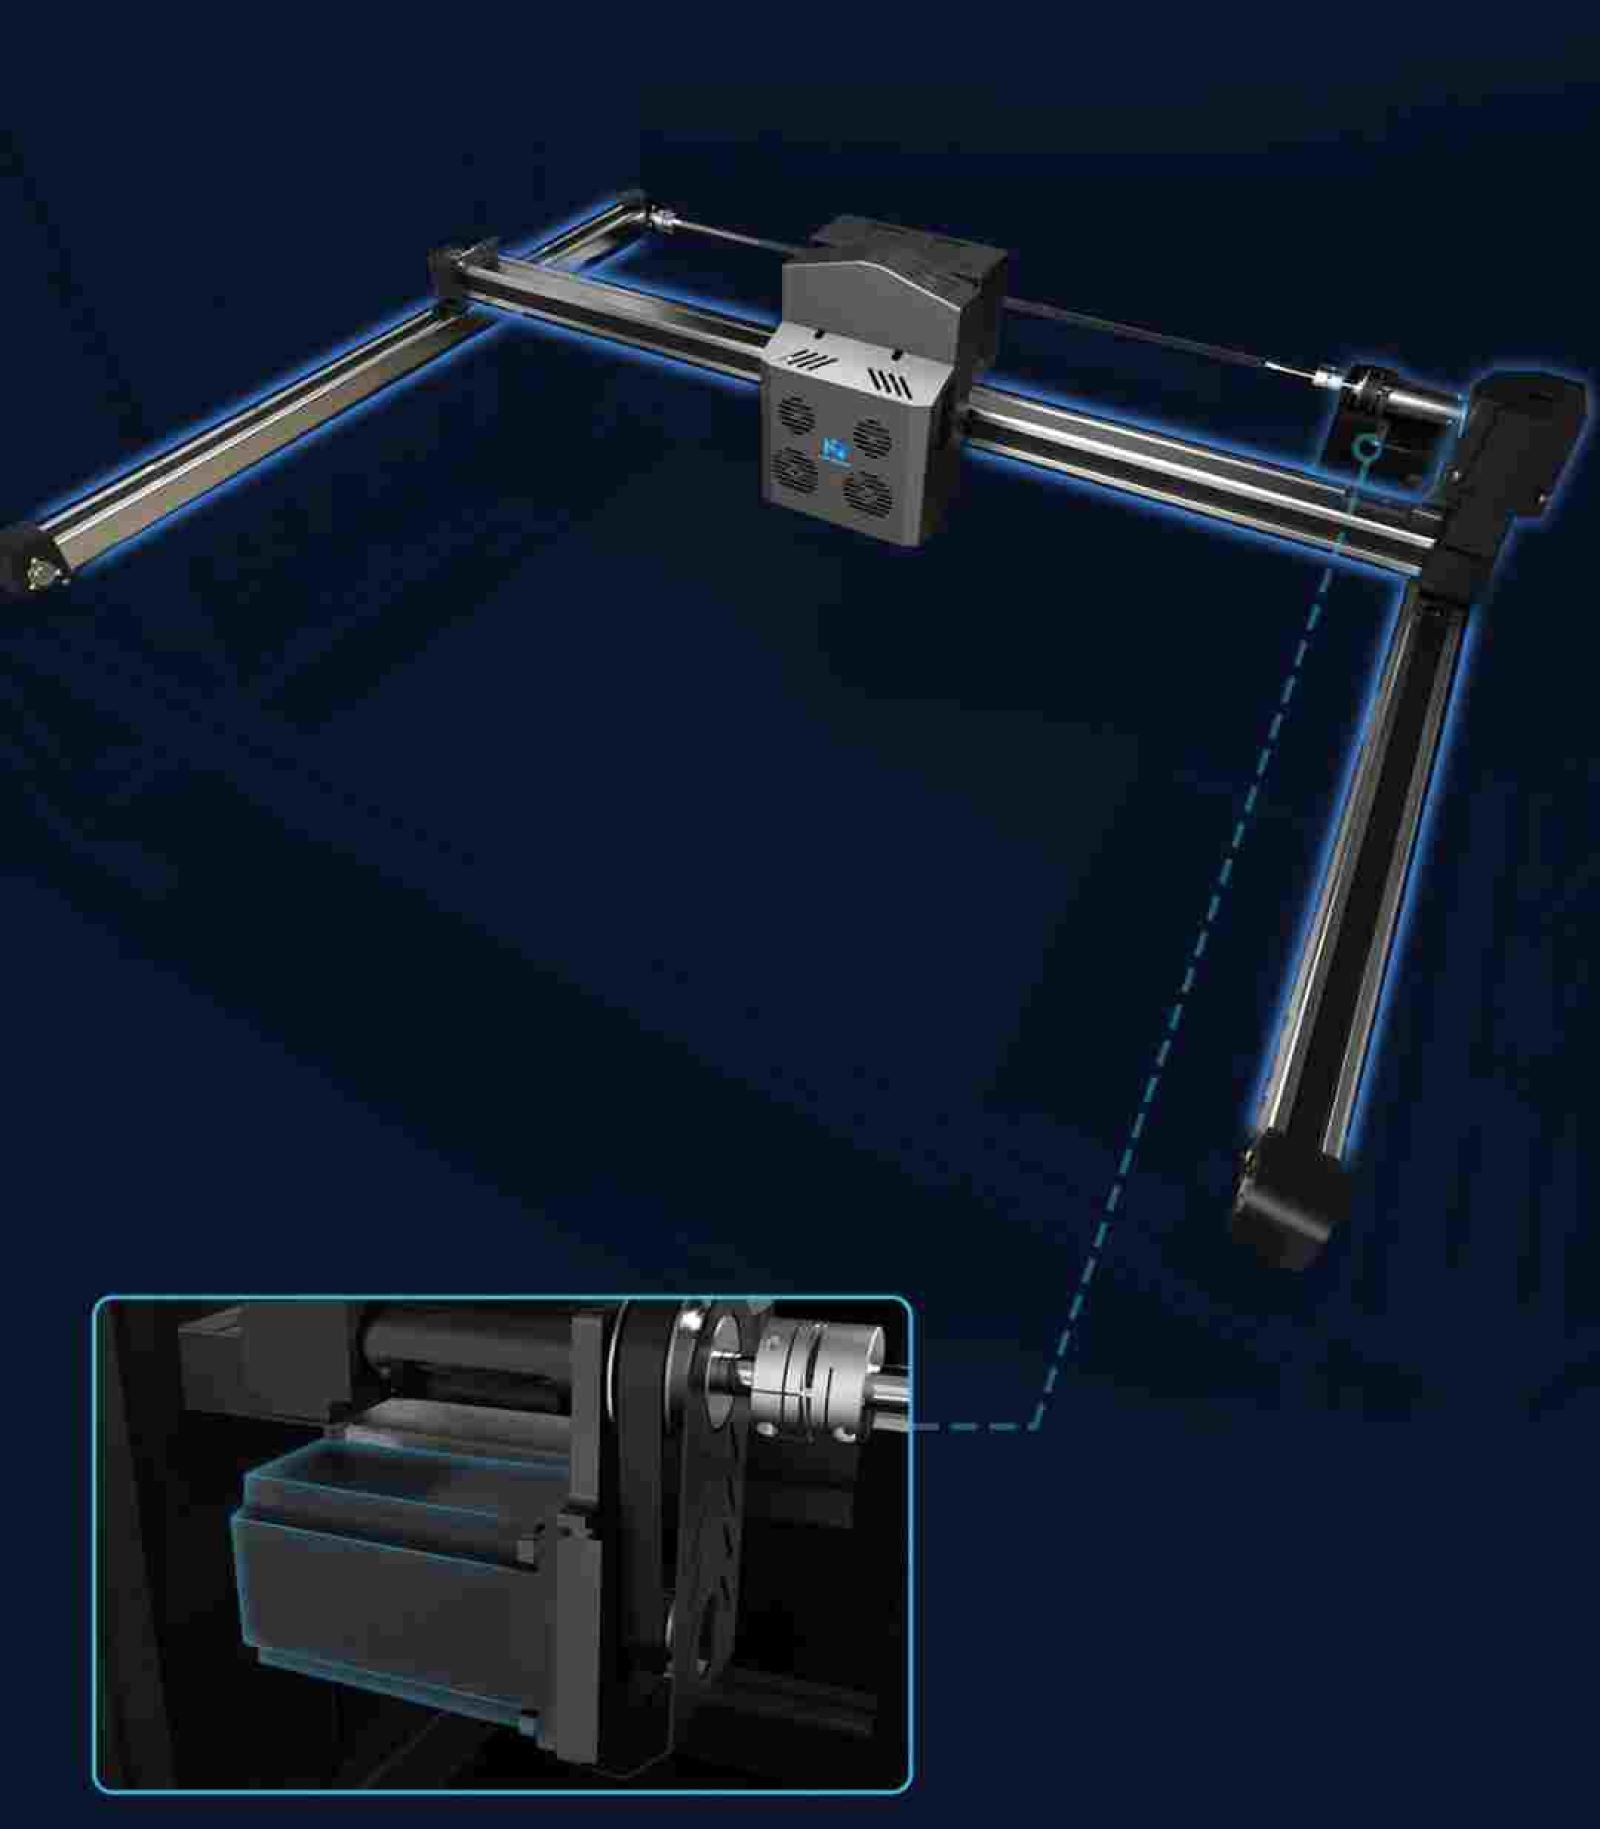

After being connected via WiFi or network cable, the MD-1000D can be remotely printed and monitored in real time. At the same time, it also supports multi machine control, facilitating rapid mass production.

High Precision

Using modular guide rail structure and closed-loop motor design to ensure the stability and accuracy of the printing process

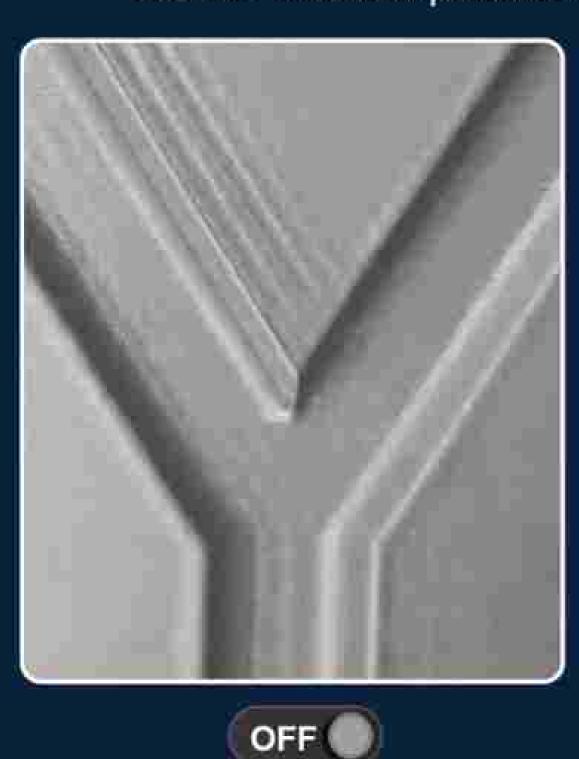

Closed-loop stepper motors

The MD-1000D is equipped with closed-loop stepper motors. Compared to traditional open-loop stepper motors, it has powerful feedback capabilities, faster speeds, higher precision, and lower heat generation.

Input Shaper

Reduce vibration patterns and make the surface smoother

Flow Control

Improved print quality and accuracy. Flow control allows precise management of the amount of filament being extruded, reducing errors like under/over-extrusion. This leads to smoother prints with sharper details.

OFF

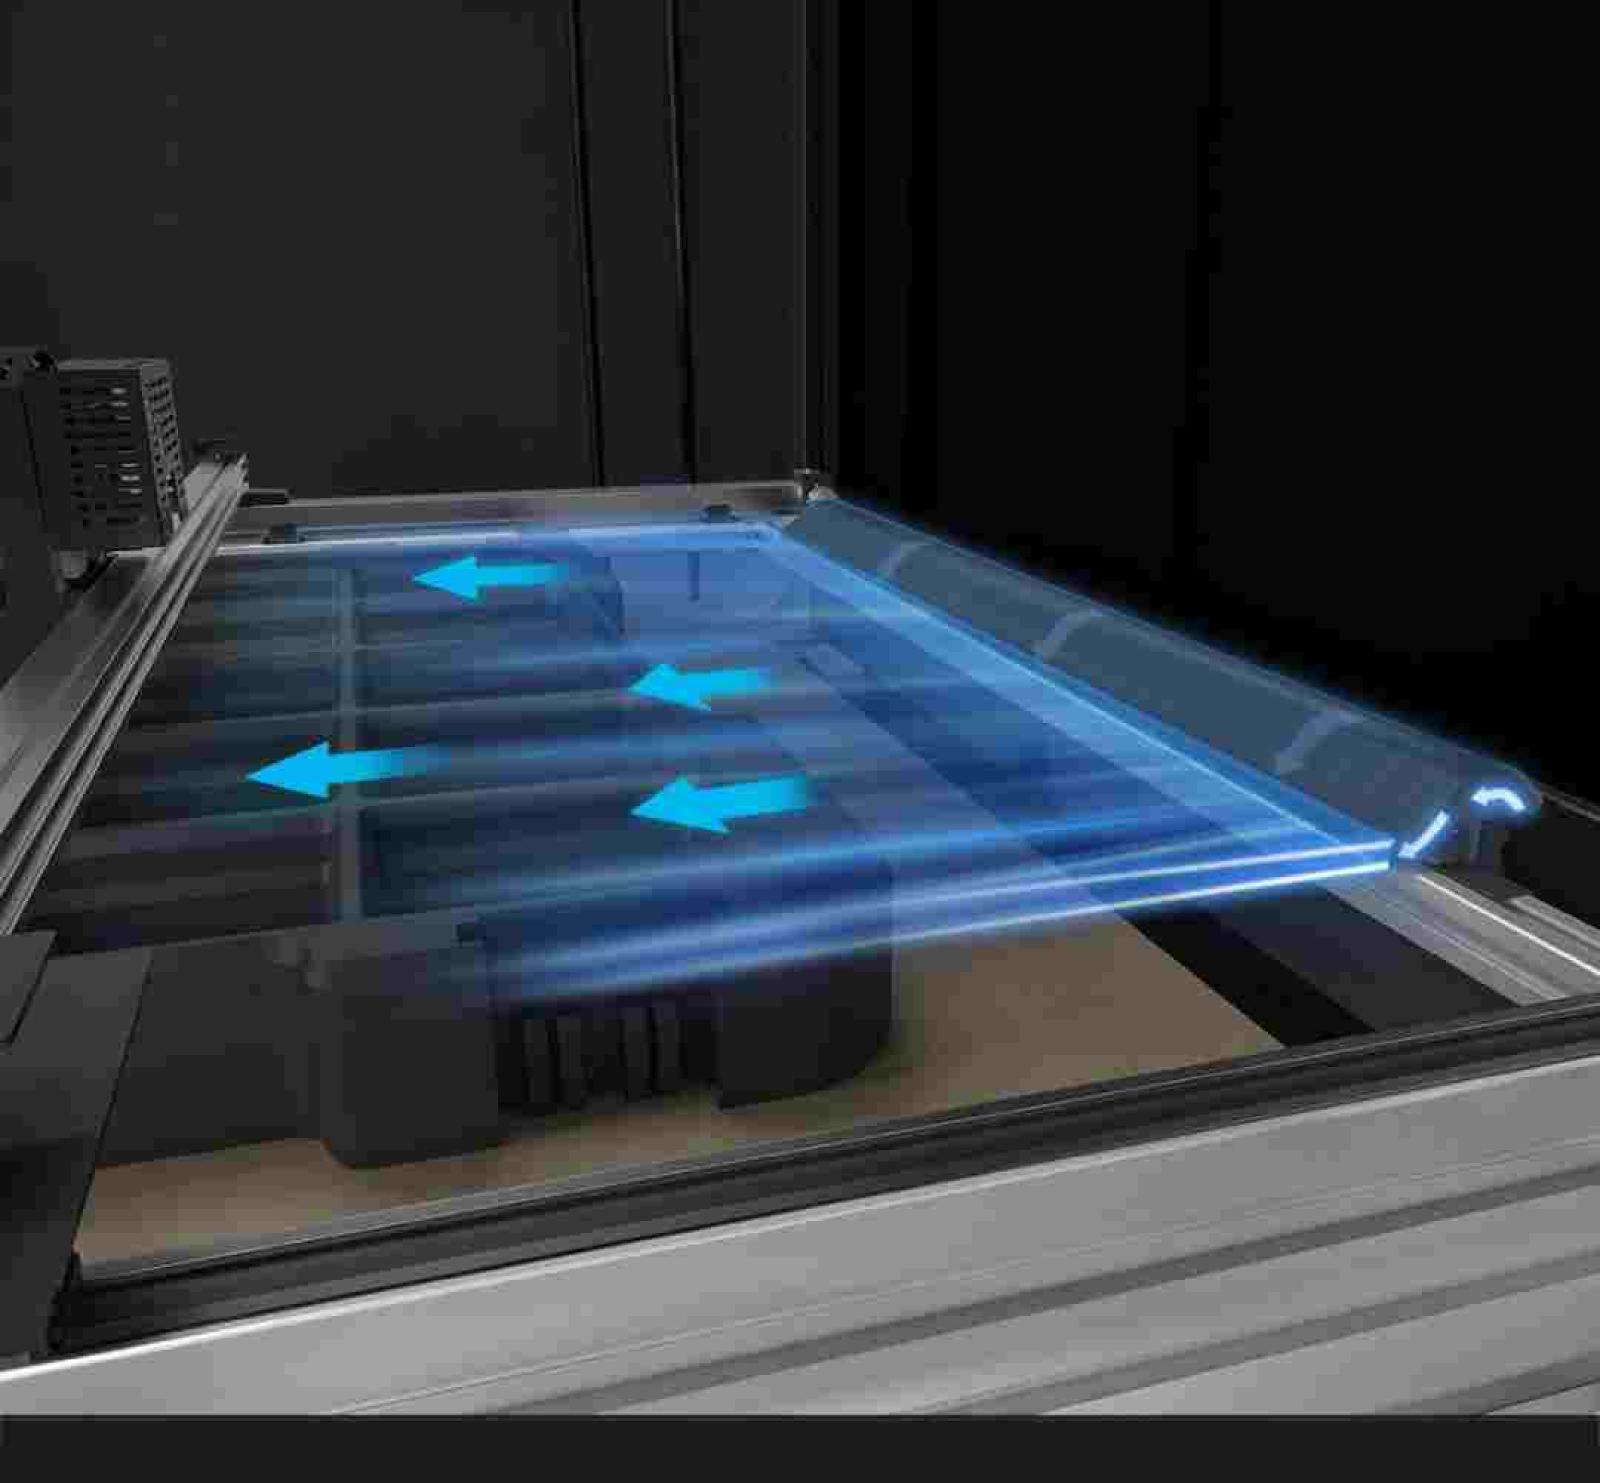

ON

New Cooling System Design

The dual cooling system truly takes model cooling to the next level with an aerodynamic air duct design that blasts models with intensely powerful directed airflow for enhanced cooling capabilities, crafting perfect prints.

Speed cool solidification, effectively avoid stringing, warping

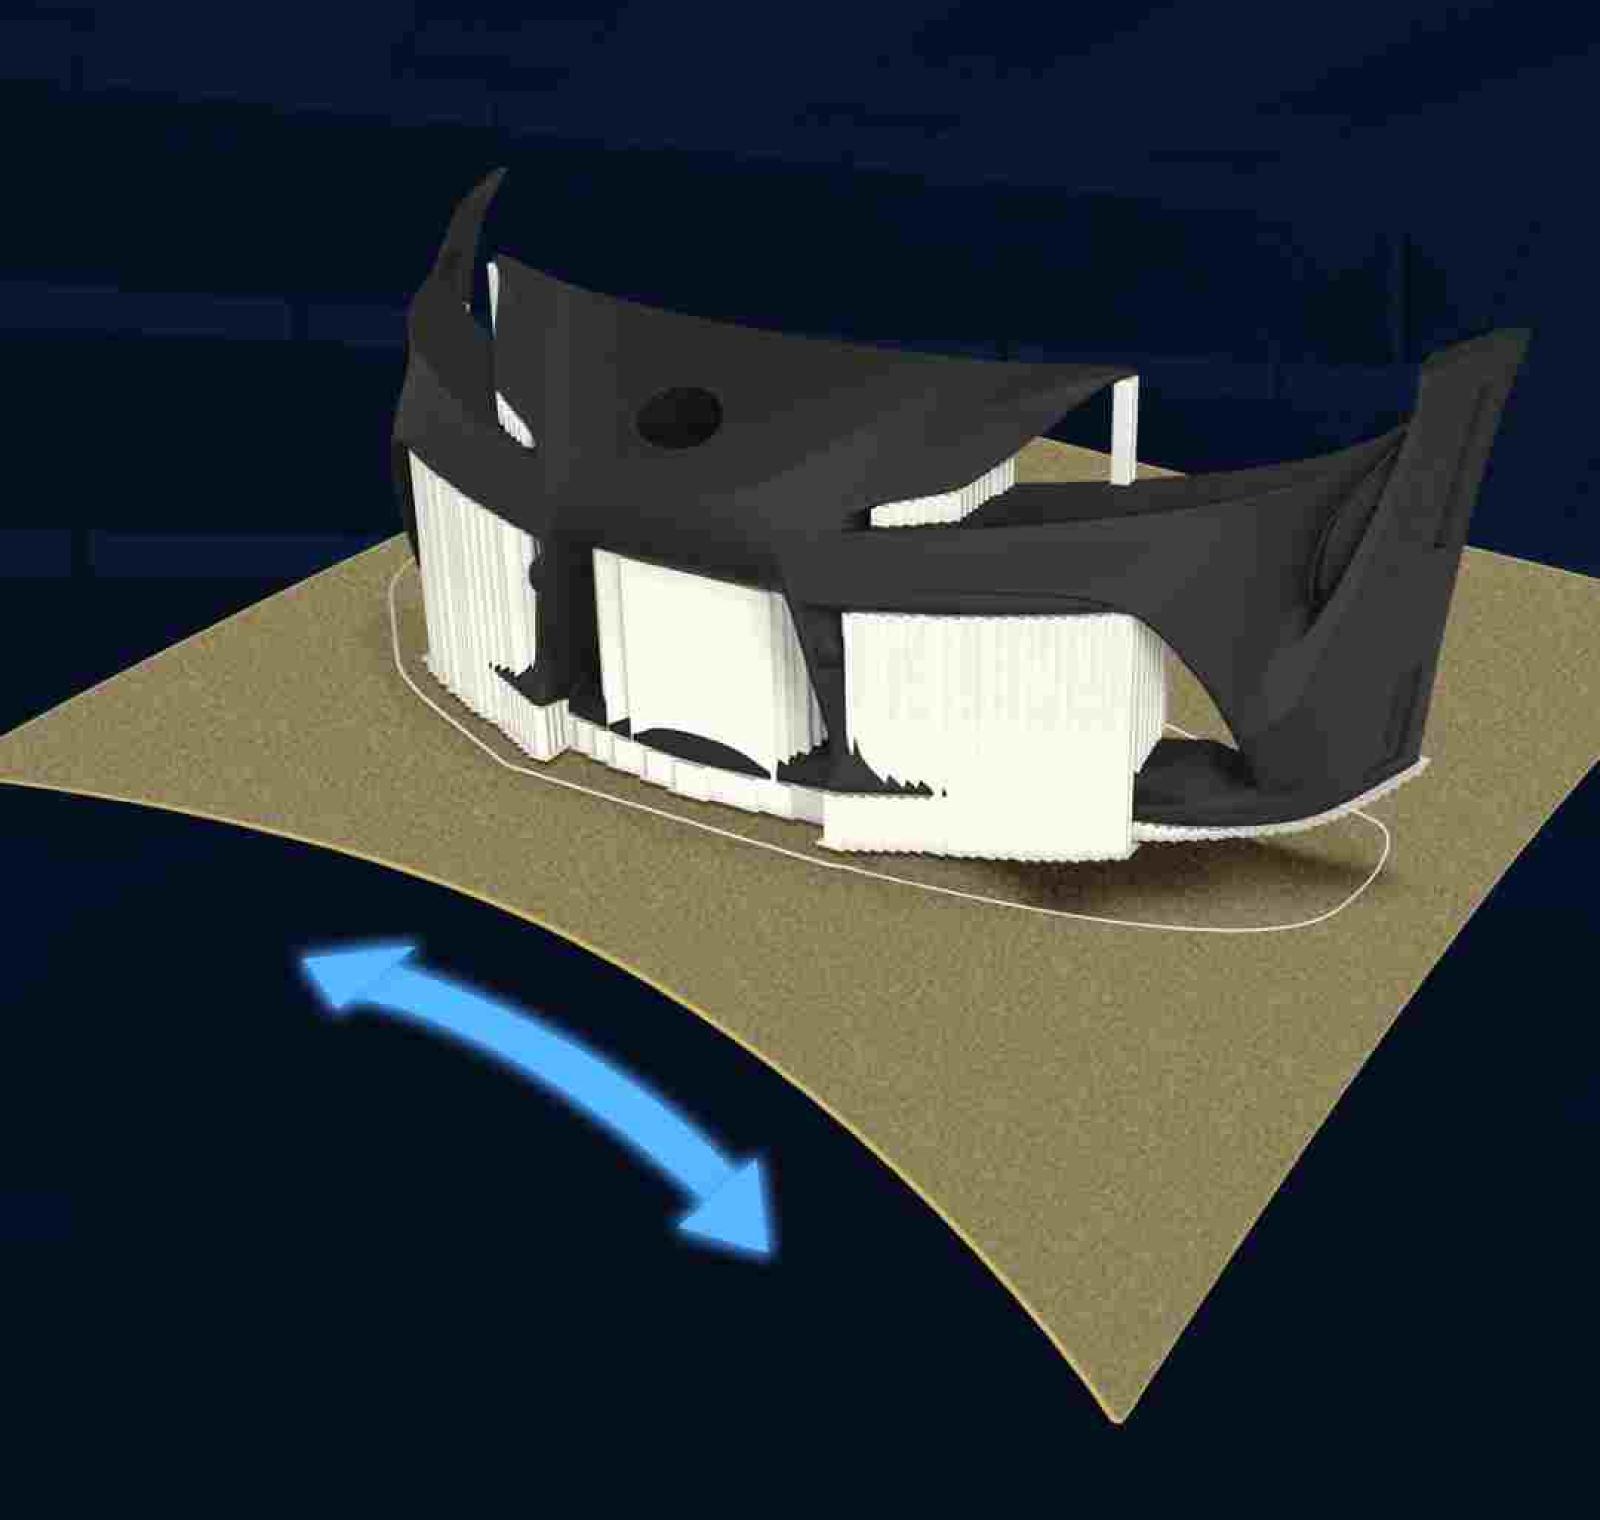

Mingda air cooling effect

Regular air cooling effect

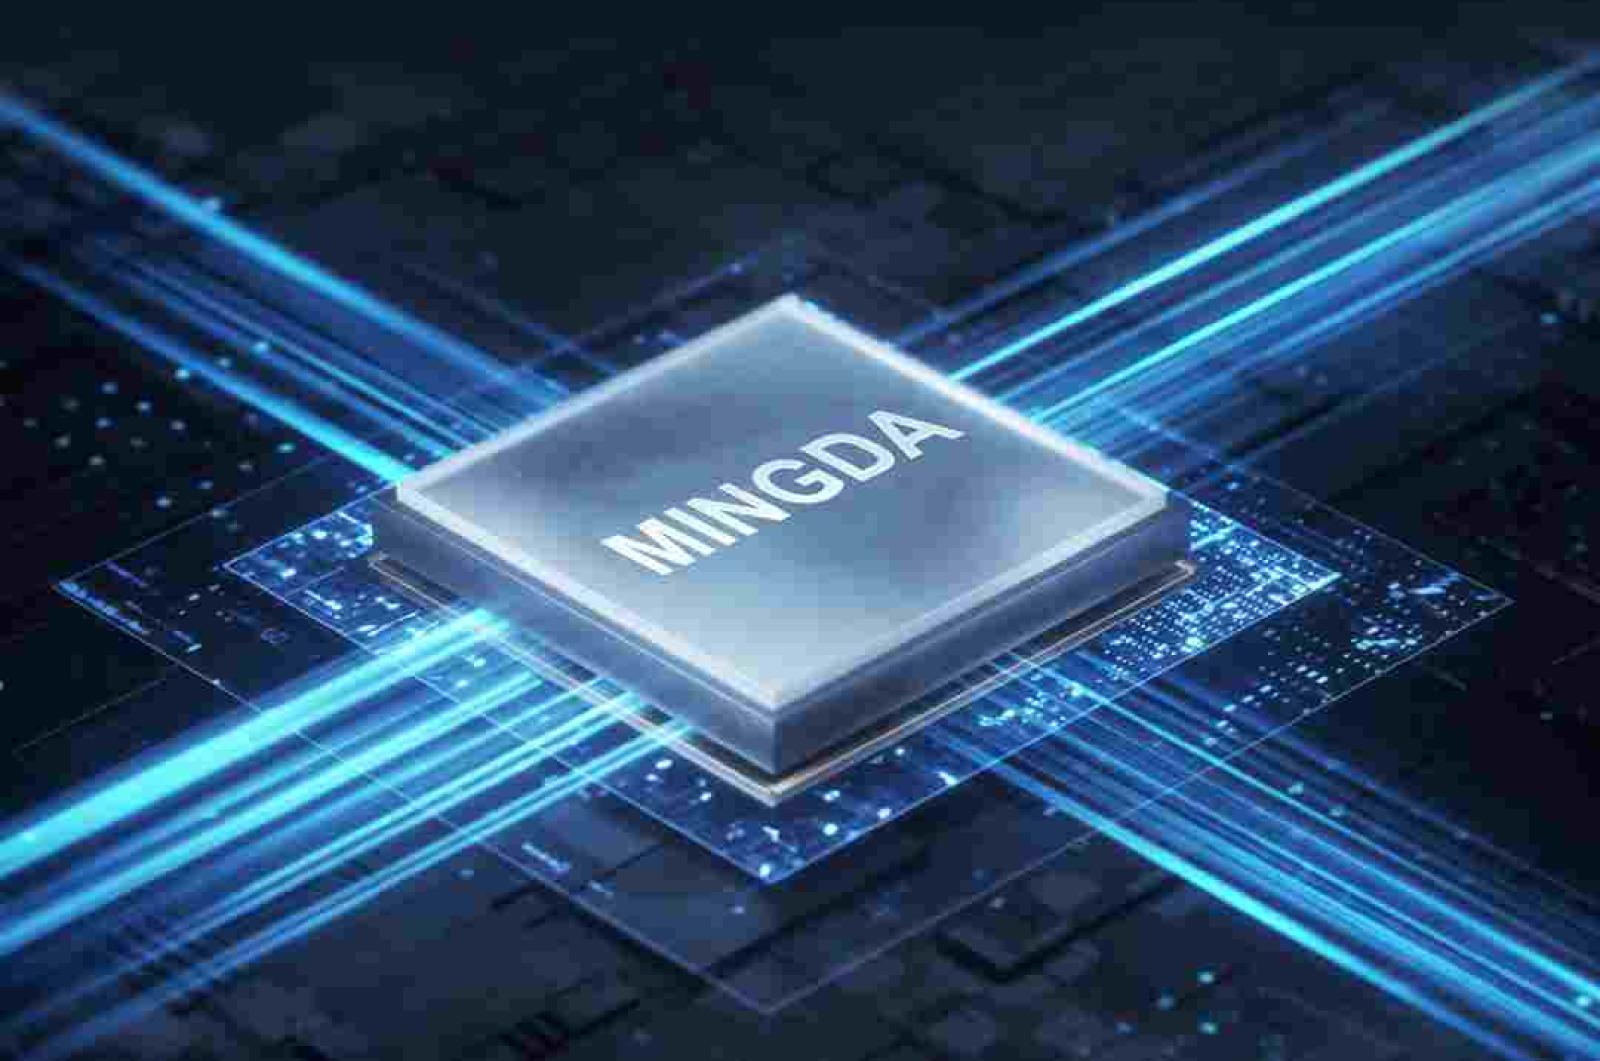

PEI Flexible Printing Platform

It has strong adhesion, high temperature resistance, and is suitable for various consumables. It can be easily removed by bending.

MINGDA Self-developed Core Hardware Delivers Speedy Smooth Performance.

This high-performance 64-bit self-developed motherboard, powered by the 6-core CPU, ensures fast processing of data and rapid completion of 3D printing tasks. With 32GB of memory, you can quickly store, export, and print large files with ease.

10-inch IPS

High-definition Large Screen

MD-1000D has a 10-inch IPS high-definition computer screen. Compared with traditional LCD screens, it can see bright, saturated, and natural high-quality images from any angle. At the same time, it is more environmentally friendly and saves electricity.

Support multiple languages

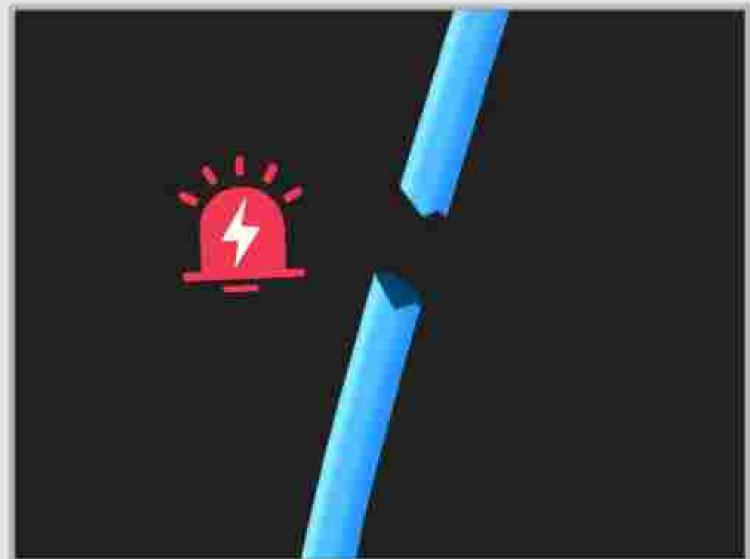

- English
- 6. Hebrew
- Danish German
- 8. Italian
- 4. Spanish
- 5. French
- 7. Hungarian
- 9. Japanese
- 10. Korean
- 11. Poland
- 12. Portugal
- 13 Russia
- 14. Sweden
- 15. Turkey
- 16. Ukraine
- 17. Chinese
- 18 Dutch
- 19. Czech
 - etc

Self Check when Power on

When power on it can automaticly check the status of the extruder, hot bed, camera, automatic leveling, fan, and other components; If there are any abnormalities, a prompt will be displayed on the printer screen for quick and convenient processing.

Smart Resume Printing Function

The machine can automatically resume printing after power offer, less worries on print failure.

Automatic Filament Detection

It will pause the printing process, if the filament run out or if the filament is broken.

Compatible With Various Filaments

Common filament

PLA, TPU, PETG, etc

Support filament

S-Mulit, S-HtPA etc

Engineering filament

HtPA, PET-GF, PET-CF, PA12-CF, HTPA-GF, HTPA-CF, PA-GF25, PA-CF25, etc

Applicable Industries

Automotive industry

Functional prototyping

Fixture

Prototyping and design
